EXPERIENCES

Total eBiz Solutions Pte Ltd

Singapore

Full Stack Developer Intern

May 2025 – April 2026

- Resolved technical tickets to maintain high client satisfaction through efficient debugging and hotfixes in .NET and SQL
- Developed and deployed custom feature changes to optimize full-stack application performance under high-traffic conditions
- Strengthened application security by resolving critical vulnerabilities identified in VAPT assessments, hardening code to ensure data protection compliance

Accenture

Singapore

Associate Software Developer (Technical Architecture Team))

May 2021 – July 2022

- Selected for Technical Architecture team to assist in designing, deploying, and maintaining scalable enterprise solutions
- Managed cloud infrastructure setup on Microsoft Azure, implementing server hardening and network isolation protocols for sensitive environments
- Developed and deployed automation scripts via PowerShell and Azure DevOps Pipelines to streamline tasks across servers and MS SQL databases

SoftBank Telecom Singapore

Singapore

Software Developer Intern

May 2017 – April 2018

- Developed and optimized autonomous behaviors and web control interfaces (HTML/CSS/JS) for NAO social robotics applications using Python
- Delivered live demonstrations and provided technical consultations to clients to validate system requirements

PROJECTS

Cloud-Native Portfolio: MyResume (React, TypeScript, .NET Core, Azure, Terraform)

github.com/Lacketronik/MyResume

- Architected and executed a 4-phase cloud migration strategy for a full-stack portfolio app, evolving a virtualized stack into a modern serverless model
- Transitioned manual cloud deployments ("ClickOps") into a reproducible environment by provisioning the initial stack using Terraform (IaC)
- Refactored the monolith into a decoupled, scalable serverless architecture using Azure Static Web Apps, Functions, and Cosmos DB (NoSQL)
- Automated 100% of infrastructure management, implementing end-to-end CI/CD and configuration lifecycles via Terraform and GitHub

AWS Cloud Infrastructure: SingaPourCast (AWS, EC2, ELB, ASG, RDS, VPC)

- Designed a highly available multi-tier AWS infrastructure for a weather forecasting and email subscription app, integrating the OpenWeather REST API for real-time data fetching
- Ensured fault tolerance across a 7-EC2-instance architecture by configuring an Elastic Load Balancer (ELB) and Auto Scaling Group (ASG) to dynamically manage web traffic
- Implemented network security best practices by engineering strict Route Tables and Security Group rules to isolate the public-facing web tier from internal backend tiers
- Enforced principles of least privilege by restricting the batch processing server and Amazon RDS database access exclusively to authorized upstream application tiers

EDUCATION

Singapore Institute of Technology & Digipen Institute of Technology

Oct 2026

Bachelor of Science in Computer Science in Interactive Media & Game Development

Temasek Polytechnic

Apr 2018

Diploma in Computer Engineering

SKILLS

- **Languages & Frameworks:** C, C++, C#, SQL, TypeScript, JavaScript, Java, .NET, React, jQuery, Bootstrap
- **Tools & Cloud:** Azure, Terraform, CI/CD, REST APIs, Git

CERTIFICATE

Microsoft Certified: Azure Fundamentals (AZ-900) – Microsoft: C1481DC33EEBD175

May 2026 – No Expiration
